The full set of NMR experiments is exemplified below (figures S1-S4) for a urine sample from a 5 ½ y.o. boy with MMA (Case 5).

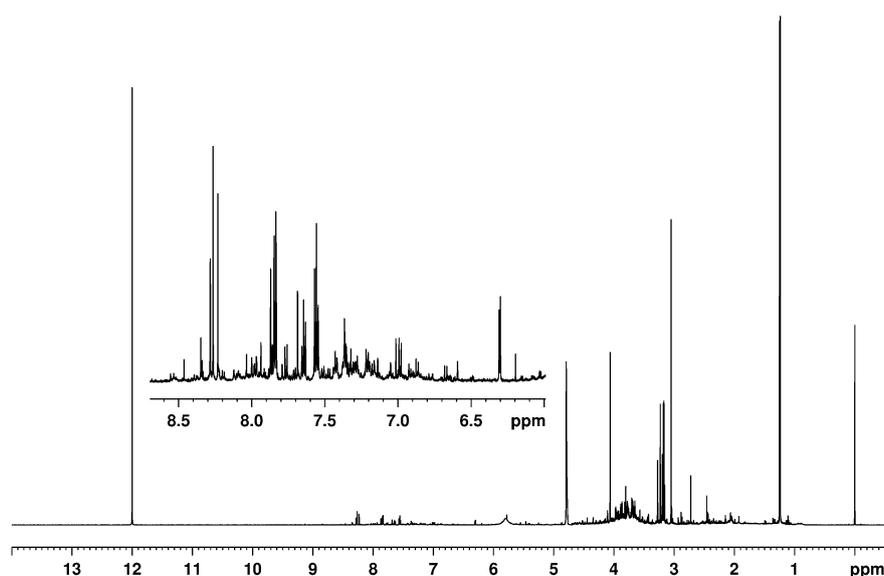

Figure S1. ¹H-NMR spectrum at 600 MHz in fast acquisition mode and ERETIC signal (at 12.0 ppm) for a urine sample from a 5 ½ y.o. boy with MMA (Case 5).

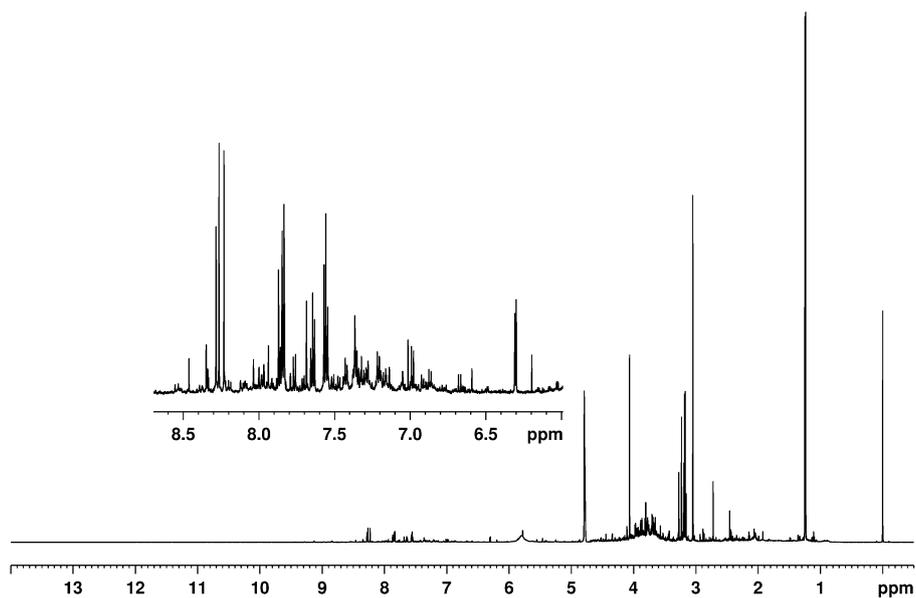

Figure S2. ^1H -NMR spectrum at 600 MHz in fully relaxed acquisition mode for a urine sample from a 5 $\frac{1}{2}$ y.o. boy with MMA (Case 5).

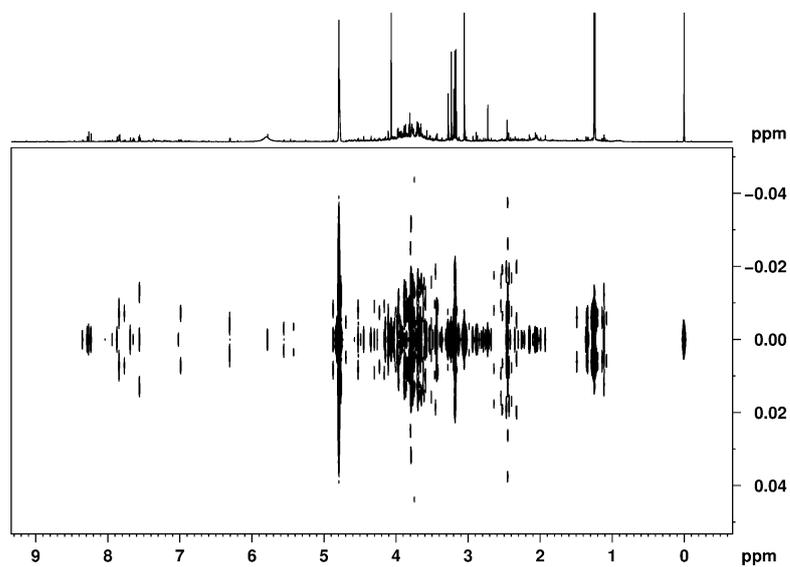

Figure S3. ^1H J-Resolved NMR spectrum at 600 MHz for a urine sample from a 5 $\frac{1}{2}$ y.o. boy with MMA (Case 5), used as support for assignment of signals in the ^1H -NMR spectra.

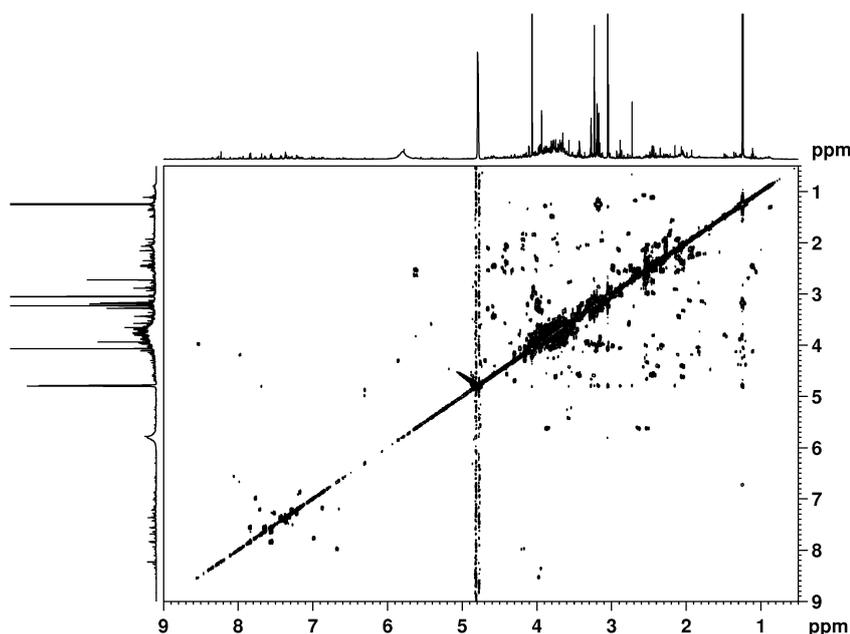

Figure S4. H-H COSY NMR spectrum at 600 MHz for a urine sample from a 5 ½ y.o. boy with MMA (Case 5), used as support for assignment of signals in the ¹H-NMR spectra.

The full sets of concentrations for both MMA specific and non-specific metabolites as determined by NMR urinomics and previously reported reference ranges are presented below in tables S1 and S2.

Table S1. Averaged absolute concentrations (mmol/L urine) and ranges for individual values (in brackets) for presently monitored MMA patients and previously reported controls. The number of samples *n*¹ in which a particular metabolite is detected may be lower than the total number of samples investigated.

Averaged Absolute Concentrations and Ranges for MMA Patients (mmol/L)	Concentrations and Ranges for Controls Previously Reported (mmol/L)
Creatinine (Crn)	
1.348 (0.515-2.295) <i>n</i> =9/9 Case 1 (7 do-9 mo) [MMUT]

¹ For situation when the number of reported samples is smaller than the total number of samples (n=Y/X with Y<X) it means that there were X-Y situations for which the metabolite was not detected (i.e. it was either zero or below the limit of detection).

Table S2. Averaged relative concentrations (mmol/mol Crn) and ranges for individual values (in brackets) for presently monitored MMA patients and previously reported controls. The number of samples n¹ in which a particular metabolite is detected may be lower than the total number of samples investigated.

¹ For situation when the number of reported samples is smaller than the total number of samples (n=Y/X with Y<X) it means that there were X-Y situations for which the metabolite was not detected (i.e. it was either zero or below the limit of detection).
