

SUPPORTING INFORMATION

Perturbating Intramolecular hydrogen bonds through substituent effects or non-covalent interactions.

CONTENTS

Figure S1. Relative stability of the $\text{HOCH}_2(\text{CH}_2)_n\text{CH}_2\text{NH}_2$ ($n = 0-2$) aminoalcohols stabilized by the formation of an $\text{O-H}\cdots\text{N}$ IMHB or a $\text{N-H}\cdots\text{O}$ IMHB.

Figure S2. Molecular structures of the substituted $\text{HOCHX}(\text{CH}_2)_n\text{CH}_2\text{NH}_2$ ($n = 0-5$, $\text{X} = \text{H, F, Cl, Br}$) aminoalcohols.

Figure S3. Molecular structures of the substituted $\text{HOCH}_2(\text{CH}_2)_n\text{CHXNH}_2$ ($n = 0-5$, $\text{X} = \text{F, Cl, Br}$) aminoalcohols.

Table S1. Second-order orbital interactions energies between the nitrogen lone-pair and the σ^*_{OH} antibonding orbital for the $\text{HOCH}_2(\text{CH}_2)_n\text{CH}_2\text{NH}_2$ ($n = 0-3$) amino-alcohols and their $\text{O}\cdots\text{BeF}_2$ complexes

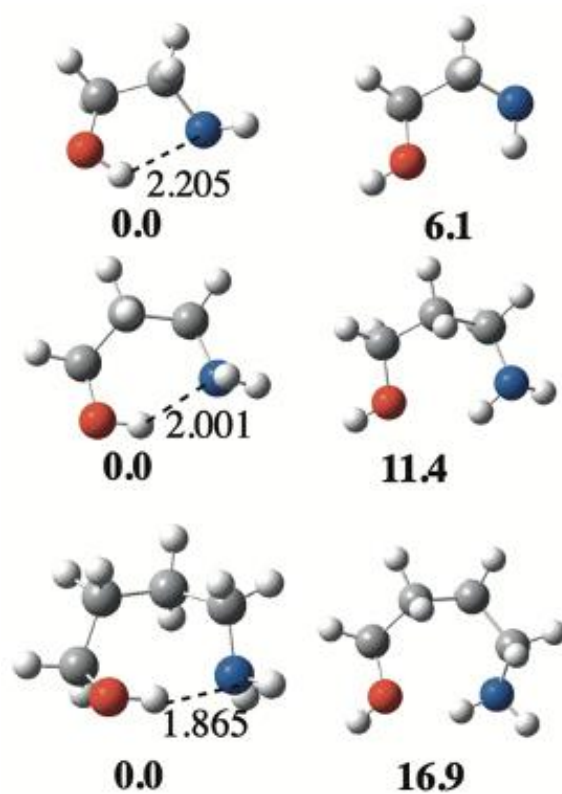

Figure S1. Relative stability of the $\text{HOCH}_2(\text{CH}_2)_n\text{CH}_2\text{NH}_2$ ($n = 0-2$) aminoalcohols stabilized by the formation of an $\text{O-H}\cdots\text{N}$ IMHB or a $\text{N-H}\cdots\text{O}$ IMHB.

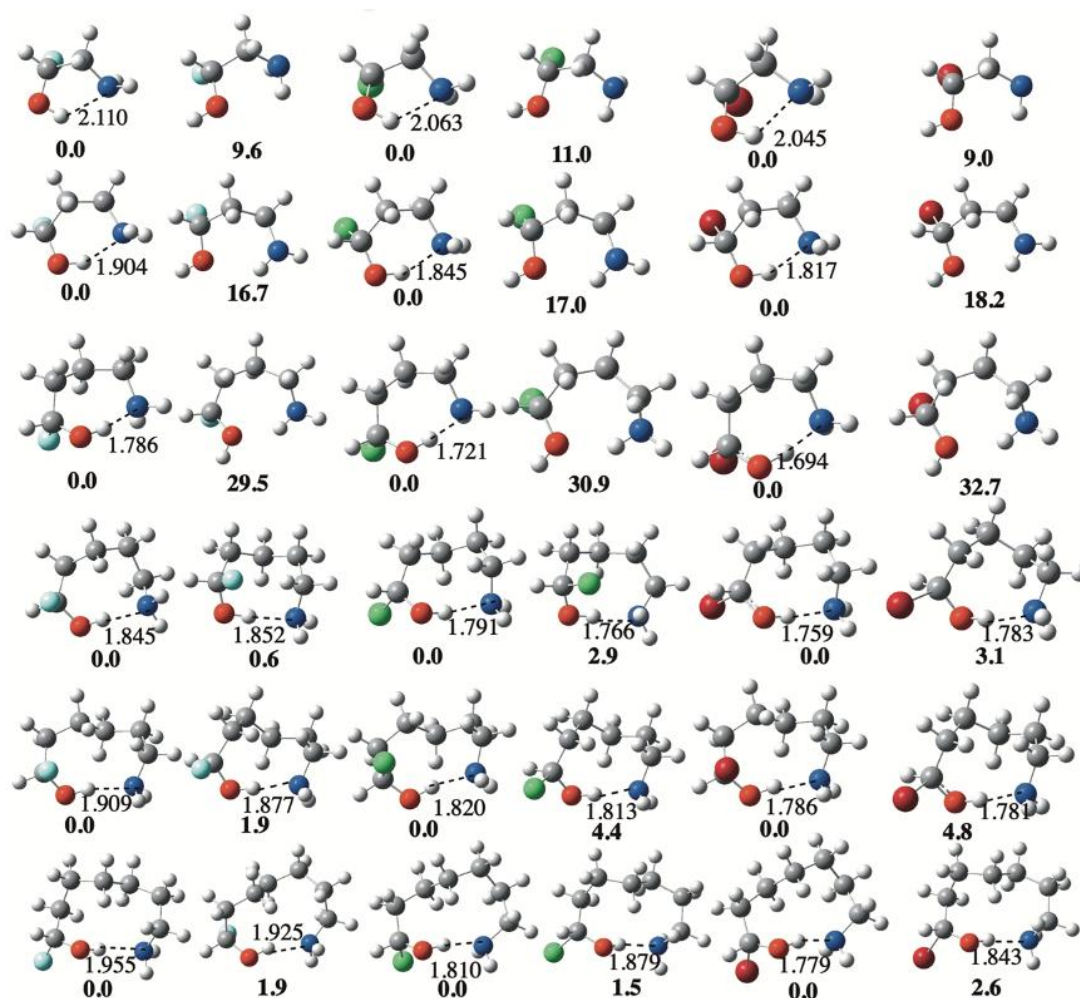

Figure S2. Molecular structures of the substituted $\text{HOCHX}(\text{CH}_2)_n\text{CH}_2\text{NH}_2$ ($n = 0-5$, $\text{X} = \text{H, F, Cl, Br}$) aminoalcohols, showing the bond-length, in Å, of the $\text{O-H}\cdots\text{N}$ (or $\text{NH}\cdots\text{O}$) intramolecular hydrogen bonds. The relative energies ($\text{kJ}\cdot\text{mol}^{-1}$) with respect to the global minimum in each case is also given.

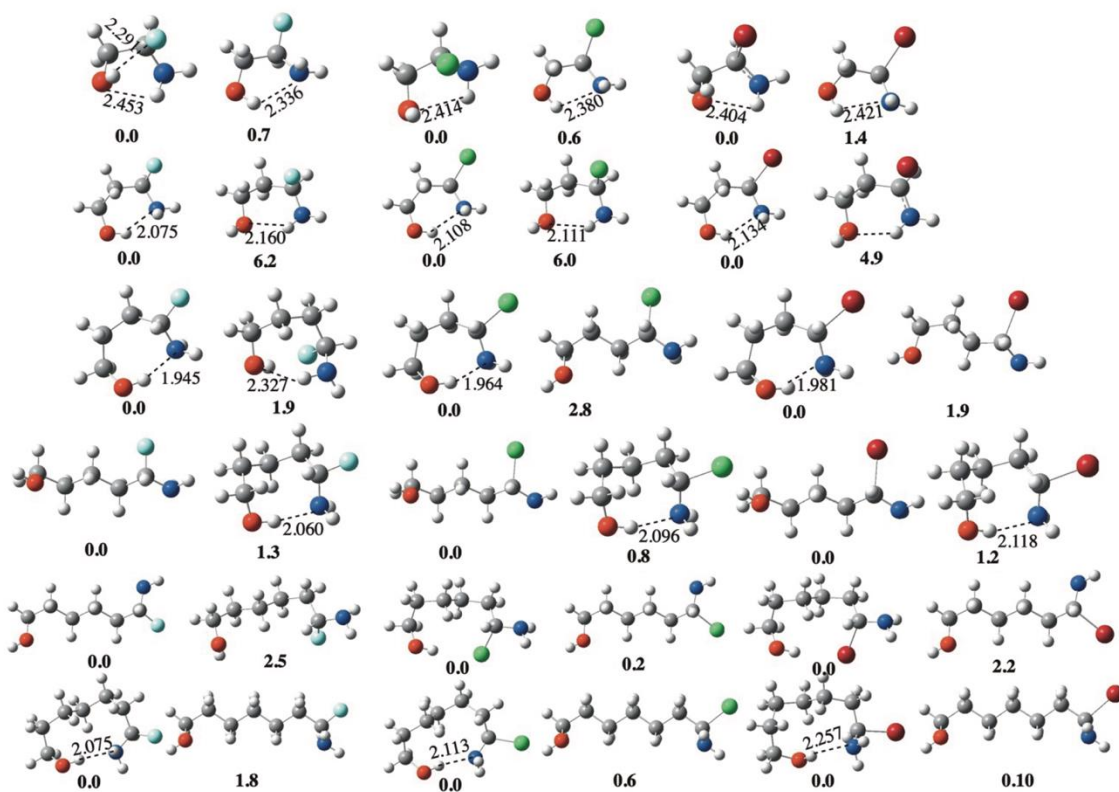

Figure S3. Molecular structures of the substituted $\text{HOCH}_2(\text{CH}_2)_n\text{CHXNH}_2$ ($n = 0-5$, $X = \text{F}, \text{Cl}, \text{Br}$) aminoalcohols, showing the bond-length, in Å, of the $\text{O}-\text{H}\cdots\text{N}$ (or $\text{NH}\cdots\text{O}$) intramolecular hydrogen bonds. The relative energies ($\text{kJ}\cdot\text{mol}^{-1}$) with respect to the global minimum in each case is also given.

Table S1. Second-order orbital interactions energies ($\text{kJ}\cdot\text{mol}^{-1}$) between the nitrogen lone-pair and the σ_{OH}^* antibonding orbital for the $\text{HOCH}_2(\text{CH}_2)_n\text{CH}_2\text{NH}_2$ ($n = 0-3$) amino-alcohols and their $\text{O}\cdots\text{BeF}_2$ complexes.

n	Isolated amino-alcohol	Complex with BeF ₂
0	6.8	24.8
1	32.3	112.1
2	67.6	215.0
3	49.2	203.9
