

Supplementary Figure 1

Supplementary Figure 1. Relative IC₅₀ determination of Compound 5, Compound 10, PF-543, and FTY720. MIA PaCa2 cells were seeded in 96 well plates and treated with 2.5-40 μM of compounds for 24h. Cell viability was assessed using MTT assay, and Relative IC₅₀ was determined using Graph pad prism software. The result is representative of three independent experiments and data are presented as mean ± SD. *** *p* < 0.001 compared with non-treated control group.
