### 3. 3D fluorescence spectra

3D fluorescence spectra of compounds **10a-1** and **15a-h**. The color scale represents a flux of emitted photons. The number above color scales indicates the maximum relative value of emission intensity represented by color scale (and indicated in a respective figure). The unit of measurement in each spectrum represents the same number of emitted photons per second, i.e. fluorescence intensity values in all spectra can be directly compared.

#### 4. Emission data scatter plots

**Figure S65.** Position of global fluorescence maxima in the studied compounds. Circles and rhombuses indicate compounds of 10 and 15 series, respectively. Blue and red colors correspond to compounds respectively with Ph and *n*-Bu substituents in R<sup>2</sup> positions. Labels indicate R<sup>1</sup>/R<sup>3</sup> substituents for 10 series and R<sup>1</sup> substituents for 15 series.

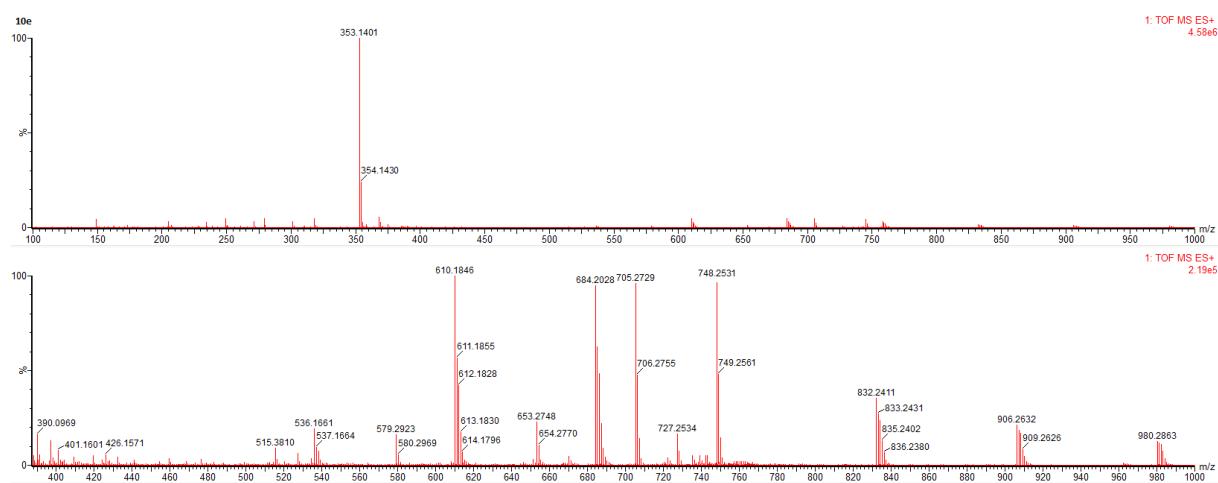

**Figure S66.** Quantum yields of the studied compounds as a function of the fluorescence intensity at a global maximum. Circles and rhombuses indicate respectively 10 and 15 series. Blue and red colors correspond to compounds respectively with Ph and *n*-Bu substituents in R<sup>2</sup> positions.
