

## Supplementary Materials

### Tables

**Table S1**

Formulation of Compound Emulsifier

| HLB <sub>mix</sub> | Tween80 (%) | Span80 (%) |
|--------------------|-------------|------------|
| 4.3                | 0           | 100        |
| 9                  | 44          | 56         |
| 10.5               | 58          | 42         |
| 12                 | 72          | 28         |
| 13.5               | 86          | 14         |
| 16                 | 100         | 0          |

**Table S2**

Variables and their levels in the Box-Behnken design.

|                                    | Levels      |          |     |
|------------------------------------|-------------|----------|-----|
|                                    | -1          | 0        | 1   |
| <b>Independent variables</b>       |             |          |     |
| A=ratio of oil (%)                 | 4           | 10       | 16  |
| B=ratio of Smix (%)                | 20          | 25       | 30  |
| C=stirring time (h)                | 0.5         | 1.0      | 1.5 |
| <b>Dependent variables</b>         |             |          |     |
| Y1=mean particle size (MPS, nm)    | Constraints | Minimize |     |
| Y2= polymer dispersity index (PDI) |             | Minimize |     |
| Y3=zeta potential (ZP, mV)         |             | Minimize |     |

**Table S3**

MS detection conditions for the five components of VOC

| component | [M+H] <sup>+</sup><br>(m/z) | DP(V) | CE(eV) | Retention time<br>(min) |
|-----------|-----------------------------|-------|--------|-------------------------|
| NBP       | 191.3→116.9                 | 76    | 29     | 4.14                    |
| SA        | 193.1→136.8                 | 76    | 17     | 3.96                    |
| ZL        | 191.1→145.0                 | 72    | 20     | 5.05                    |
| BP        | 189.3→128.0                 | 76    | 35     | 5.13                    |
| NOL       | 195.0→149.0                 | 79    | 14     | 4.78                    |
| DL (IS)   | 231.0→185.1                 | 89    | 18     | 5.49                    |

**Table S4**

Effects of surfactants on nanoemulsions

| Surfactant Type | traits             | Size/nm             |
|-----------------|--------------------|---------------------|
| Span 80         | cloudy, layered    | -                   |
| Tween 80        | cloudy             | Yellow-white lotion |
| RH40            | clear, transparent | 23.11±0.12          |

|                                     |                 |                     |
|-------------------------------------|-----------------|---------------------|
| Compound emulsifier 1<br>(HLB=9)    | cloudy          | Yellow-white lotion |
| Compound emulsifier 2<br>(HLB=10.5) | cloudy          | Yellow-white lotion |
| Compound emulsifier 3<br>(HLB=12)   | cloudy          | Yellow-white lotion |
| Compound emulsifier 4<br>(HLB=13.5) | cloudy, layered | Yellow-white lotion |

**Table S5**

Summary of results of regression analysis for the considered responses Y1-Y3.

| Factors        | MPS(Y1)     |         | PDI(Y2)     |         | ZP(Y3)      |         |
|----------------|-------------|---------|-------------|---------|-------------|---------|
|                | Coefficient | P-value | Coefficient | P-value | Coefficient | P-value |
| Model          | 8           | 0.006*  | 1.89        | 0.2073  | 6.15        | 0.0129* |
