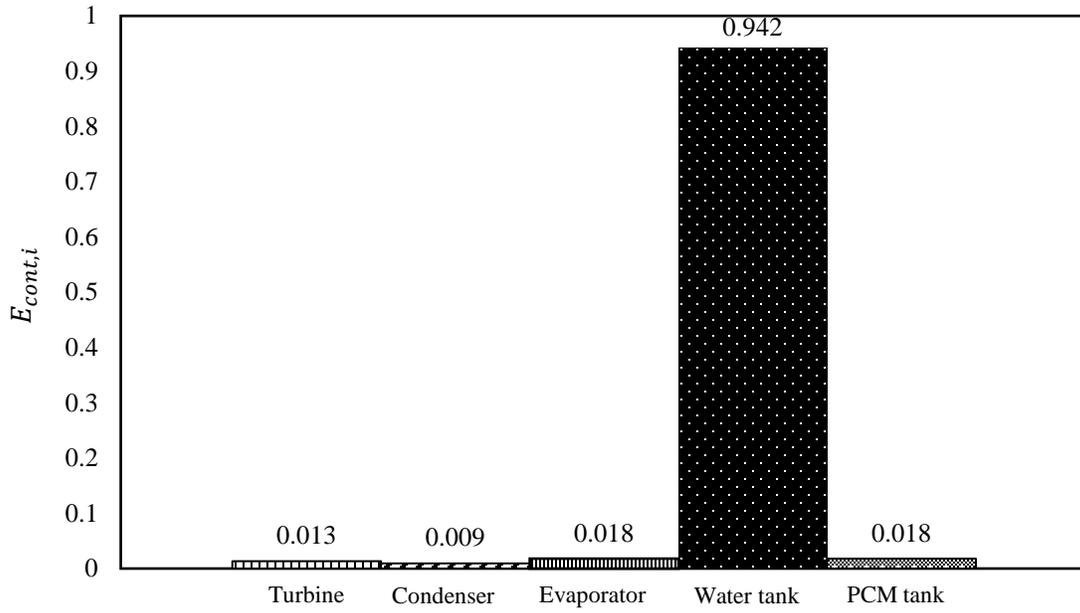

Figure S1. The contribution of each part of the cycle in the exergy destruction of the system which uses paraffin as the PCM, at a condenser pressure of 1800 kPa and condenser temperature of 30 °C .

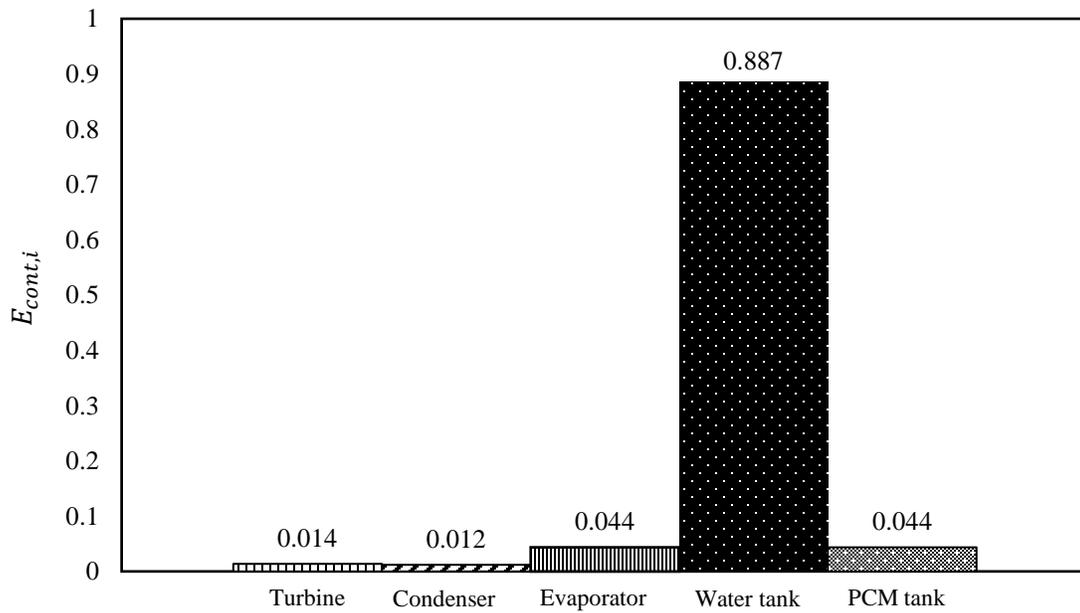

Figure S2. The contribution of each part of the cycle in the exergy destruction of the system which uses DES1 as the PCM at a condenser pressure of 2000 kPa and condenser temperature of 30 °C .

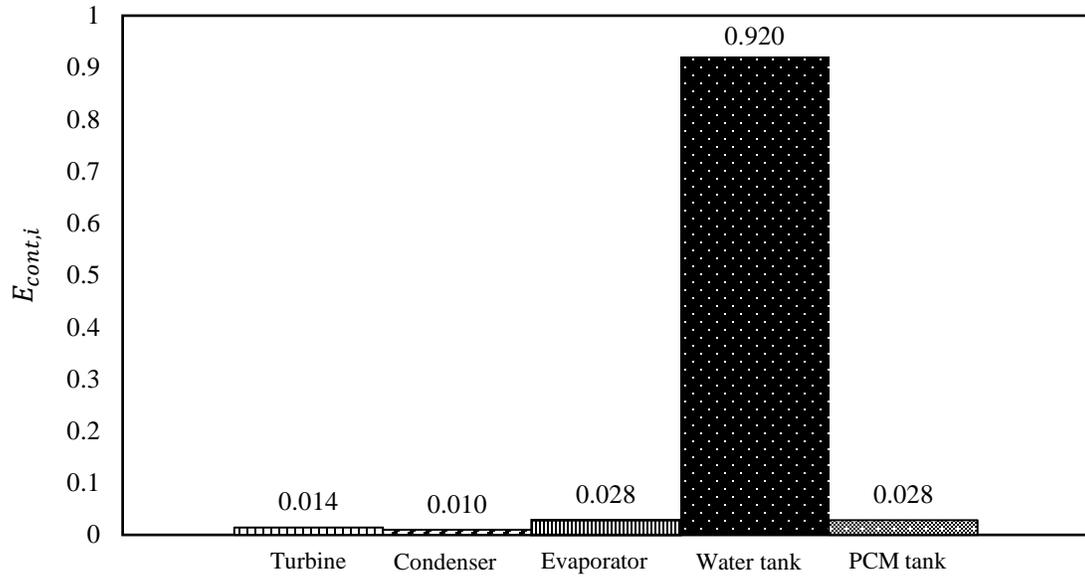

Figure S3. The contribution of each part of the cycle in the exergy destruction of the system which uses DES2 as the PCM at a condenser pressure of 2000 kPa and condenser temperature of 30 °C .

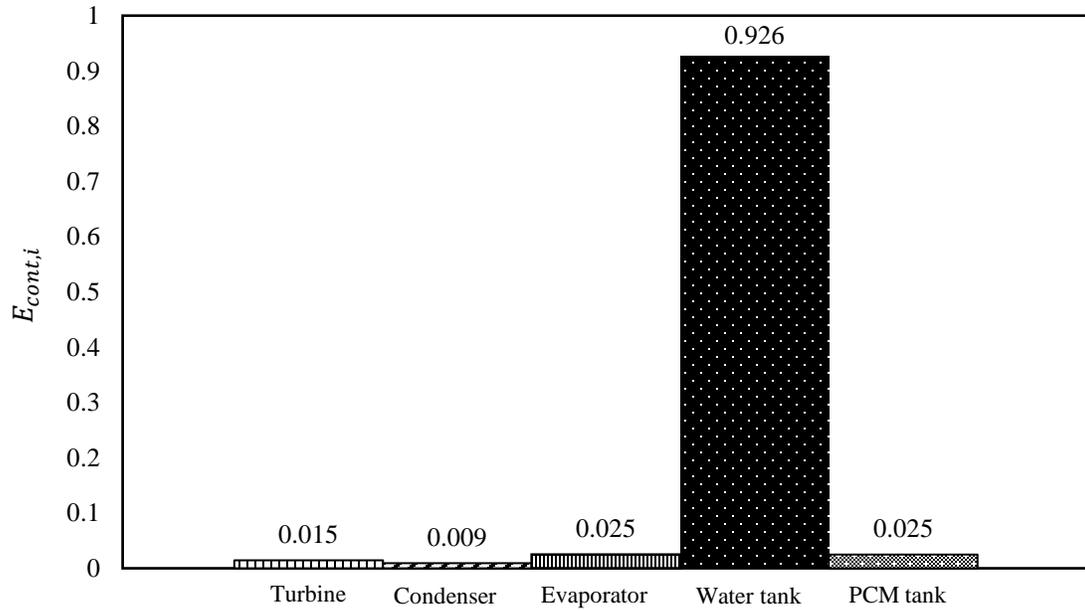

Figure S4. The contribution of each part of the cycle in the exergy destruction of the system which uses DES3 as the PCM at a condenser pressure of 2000 kPa and condenser temperature of 30 °C .

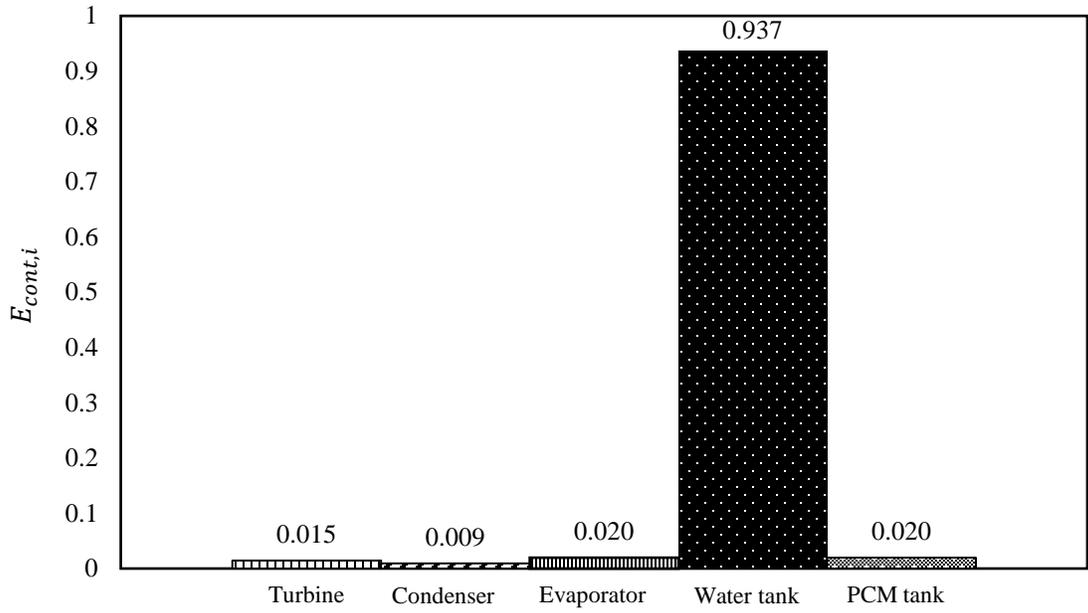

Figure S5. The contribution of each part of the cycle in the exergy destruction of the system which uses DES5 as the PCM at a condenser pressure of 2000 kPa and condenser temperature of 30 °C .

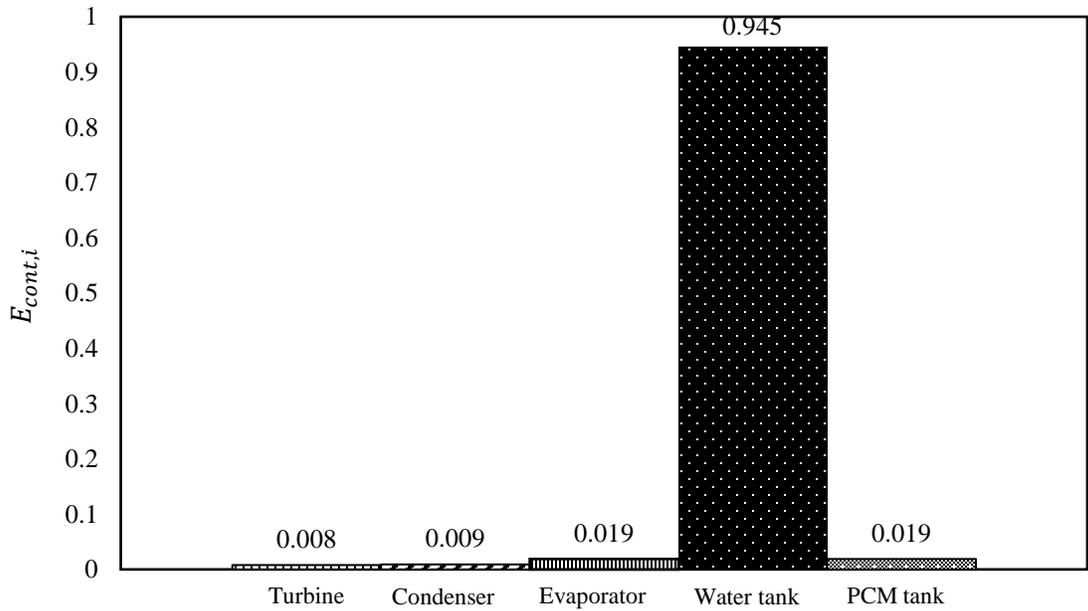

Figure S6. The contribution of each part of the cycle in the exergy destruction of the system which uses DES6 as the PCM at a condenser pressure of 1300 kPa and condenser temperature of 30 °C .

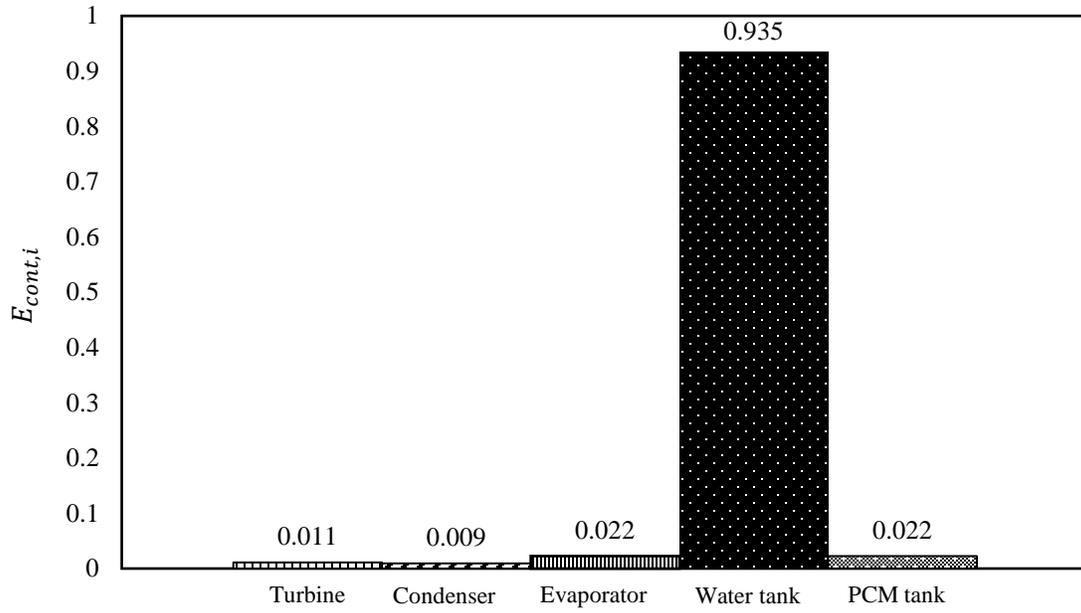

Figure S7. The contribution of each part of the cycle in the exergy destruction of the system which uses DES7 as the PCM at a condenser pressure of 1600 kPa and condenser temperature of 30 °C .
