Supplementary Information

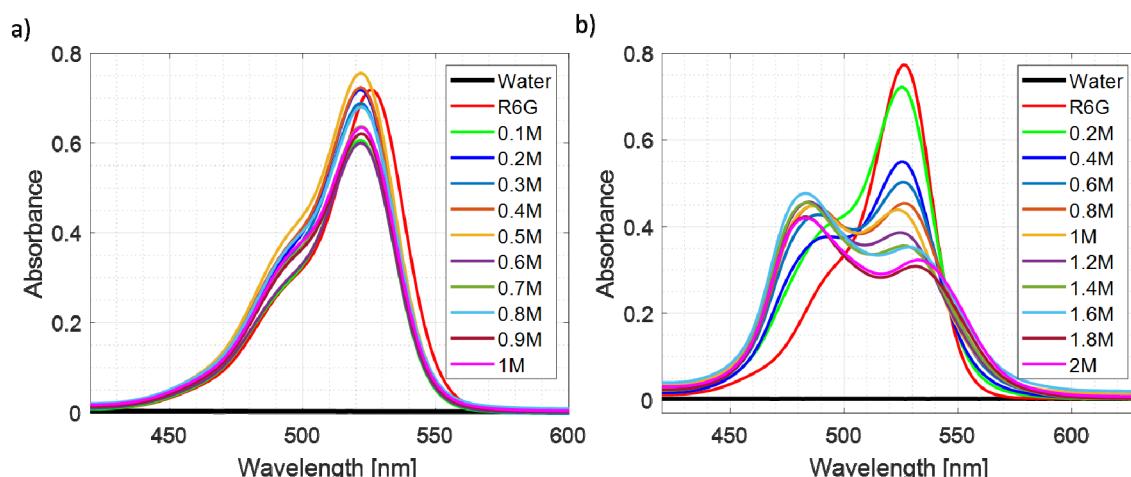

Figure S1. UV-Vis absorption Spectra of (a) R6G at different concentrations of NaOH; (b) R6G in Sodium silicate containing different concentrations of NaOH.

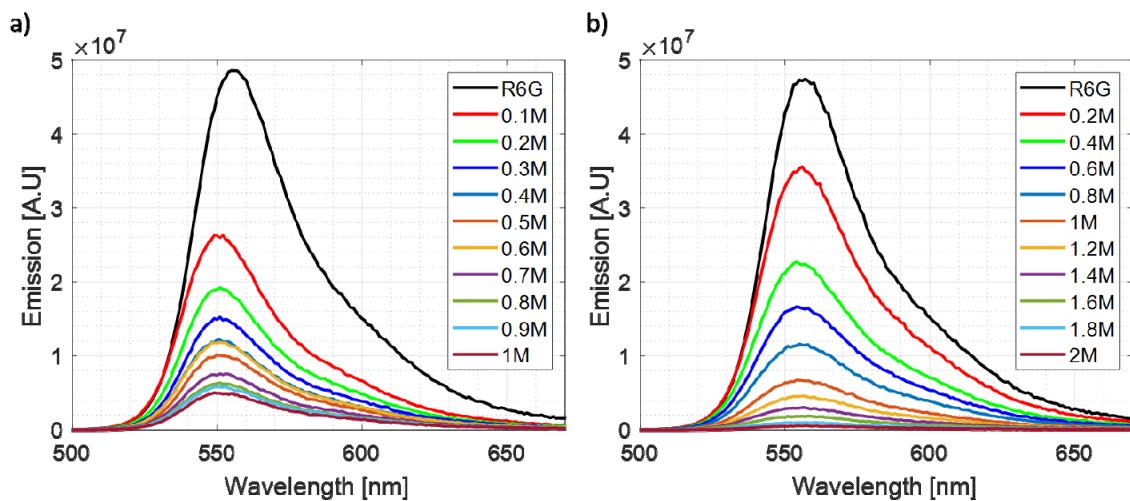

Figure S2. Emission Spectra ($\lambda_{\text{ex}}=494 \text{ nm}$) of (a) R6G at different concentrations of NaOH; (b) R6G in Sodium silicate containing different concentrations of NaOH.

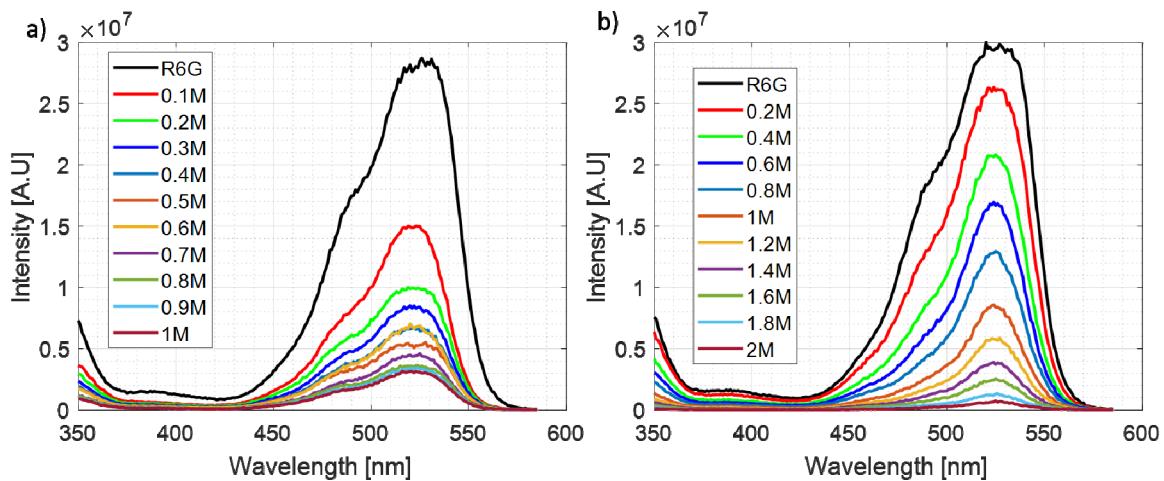

Figure S3. Excitation Spectra ($\lambda_{\text{em}}=590 \text{ nm}$) of (a) R6G at different concentrations of NaOH; (b) R6G in Sodium silicate containing different concentrations of NaOH.

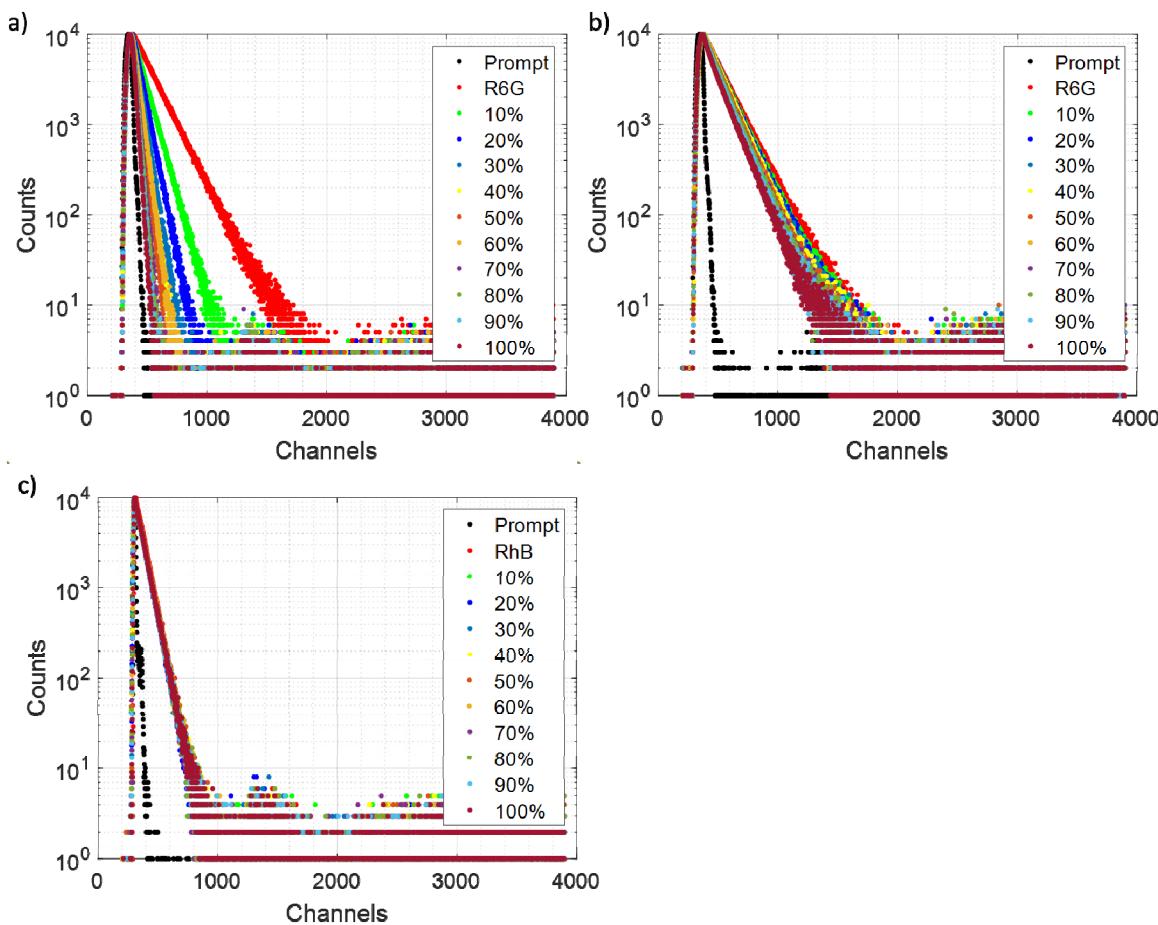

Figure S4. Fluorescence intensity decays of (a) R6G in NaOH, (b) R6G-silicate complex; (c) RB in sodium silicate.

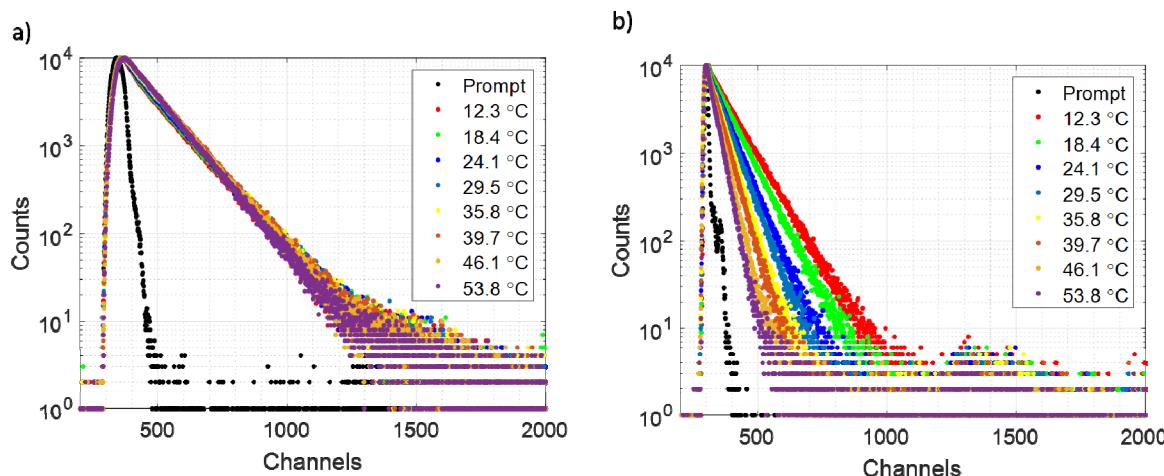

Figure S5. Fluorescence intensity decays at different temperatures (a) R6G-Silicate complex; (b) RB in Sodium Silicate.

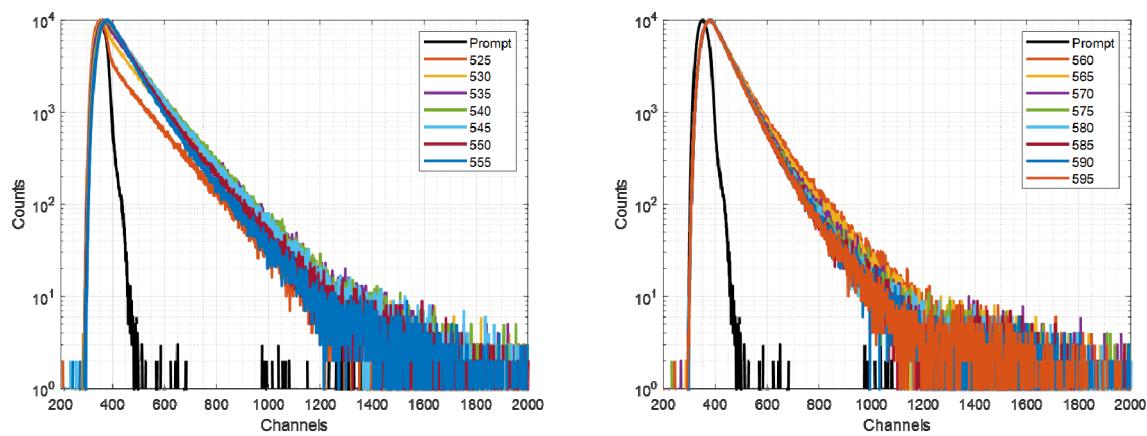

Figure S6. Fluorescence intensity decays for the multiplexed measurements.

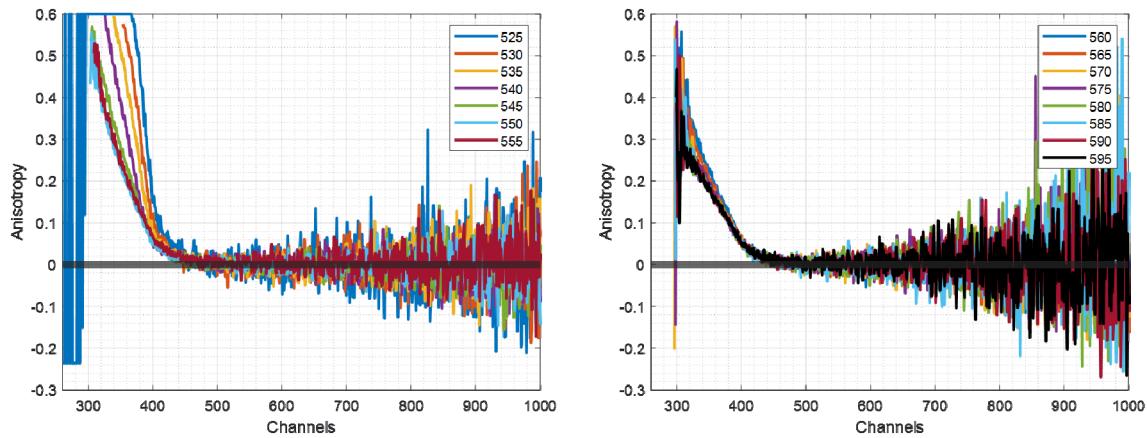

Figure S7. Anisotropy decays for the multiplexed measurements.

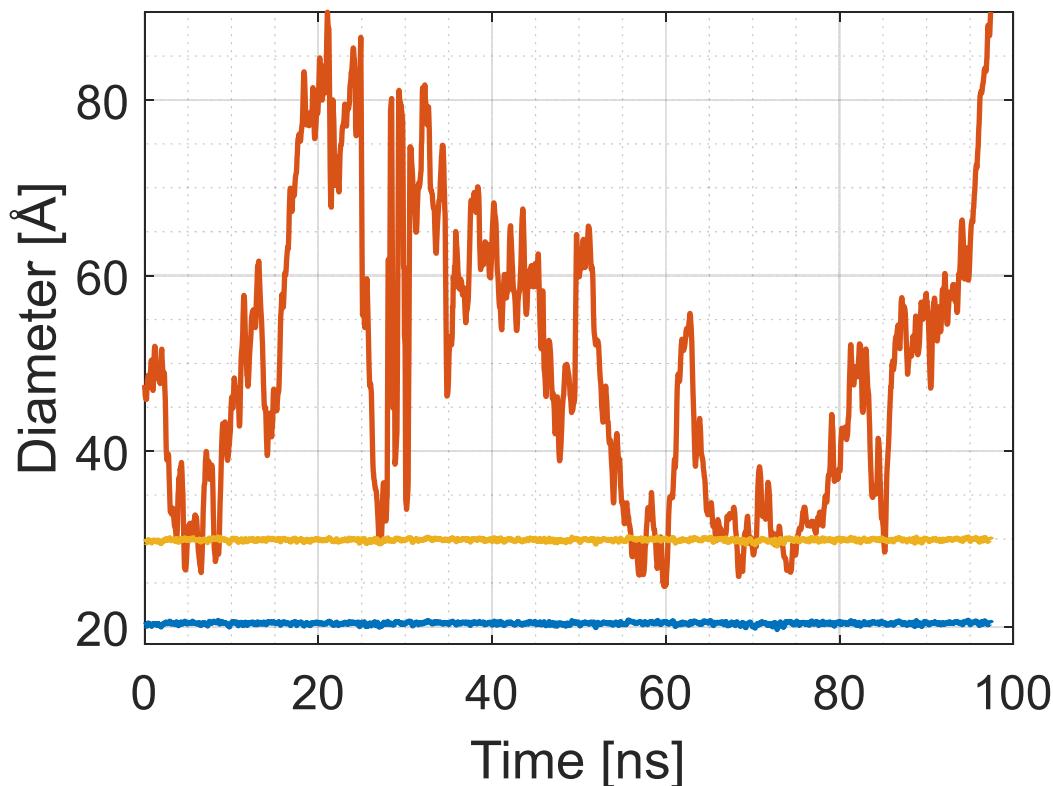

Figure S8. 20 Å diameter SNP measurement results. Colour code follows the one introduced on Figure 9 while the sum of separated sizes is ignored for clarity.

Table S1. R6G Parameters recovered from Fluorescence Intensity Decay fitting.

SiO ₂ (%)	[NaOH] M	T1 (ns)	B1 (%)	T2 (ns)	B2 (%)	C (%)	X ²
