1. Cream Bases Composition

The SC-NLC formulation was added into three cream bases (CBs), which were labeled as CBI, CBII and CBIII. On the Table S1 the composition of these CBs is depicted.

Table S1. List of components found in the cream base I, II and III.

Cream Base I	Cream Base II	Cream Base III
Water	Water	Water
Ethylhexyl methoxycinnamate	Aluminum Starch Octenylsuccinate	Ethylhexyl methoxycinnamate
C12-15 alkyl benzoate	Niacinamide	C12-15 alkyl benzoate
Cyclodextrin	Ethylhexyl salicylate	Aluminum starch octenylsuccinate
Methyl methacrylate crosspolymer	C12-15 alkyl benzoate	Cyclopentasiloxane
Potassium cetyl phosphate	Homosalate	Glycerin
Glycerin	Pentylene glycol	Nylon-2
Stearyl Alcohol	Potassium cetyl phosphate	Potassium cetyl phosphate
Tribehenin PEG-20 esters	Silica	Tribehenin PEG-20 esters
Cetyl alcohol	Tapioca Starch	Cetearyl alcohol
Tocopheryl acetate	Tribehenin PEG-20 esters	Phenoxyethanol
VP/Eicosene Copolymer	Caprylyl glycol	Caprylyl glycol
Phenoxyethanol	Hydroxypropyl starch phosphate	Acrylates copolymer
Triethanolamine	Decyl glucose	Hydrated silica
Caprylyl glycol	Ethylhexylglycerin	Aluminum hydroxide

Methylpropional BHT	Xanthan gum Tocopheryl acetate	Triethanolamine Acrylates/C10-30 alkyl acrylate crosspolymer
Benzyl Salicylate Hexyl cinnamal Citronellol Hydroxyethyl methylthiopropenamide Myristyl alcohol	VP/Eicosene copolymer Steraryl alcohol Talc Methylpropanediol Cetyl alcohol	Decyl glucoside Parfum Alginic acid Disodium EDTA Butylphenyl methylpropional
Lauryl alcohol Bis-ethylhexyloxyphenol methoxyphenyl triazine Diethylamino hydroxybenzoyl hexyl benzoate Ethylhexyl triazone	Disodium EDTA Aluminum hydroxide Stearic acid Sodium C14-16 oledin sulfonate Gossypium hirsutum extract Butylene glycol Disodium phosphate Propylene glycol Phenoxyethanol Arachidyl alcohol Hydroxyethyl methylthiopropenamide Myristyl alcohol Lauryl alcohol Iron oxide Titanium oxide Ethylhexyl methoxycinnamate Bis-ethylhexyloxyphenol methoxyphenyl triazine Diethylamino hydroxybenzoyl hexyl benzoate Ethylhexyl triazone Methylene bis- benzotriazolyl tetramethylbutylphenol	Decarboxy carnosine HCl Propylene glycol Butylene glycol Xanthan gum Benzyl salicylate PEG-12 dimethicone Hexyl cinnamal Citronellol Iron oxide Titanium oxide Bis-ethylhexyloxyphenol methoxyphenyl triazine Diethylamino hydroxybenzoyl hexyl benzoate Ethylhexyl triazone Methylene bis- benzotriazolyl tetramethylbutylphenol

2. Rheology

The Figure SI1 shows the flow and viscosity curves of the mixtures composed by 80% of cream base (I, II and III) and 20% of water (blank) or 20% of SC-NLC. Also, Figure SI2 present the SC-NLC flow and viscosity curves.

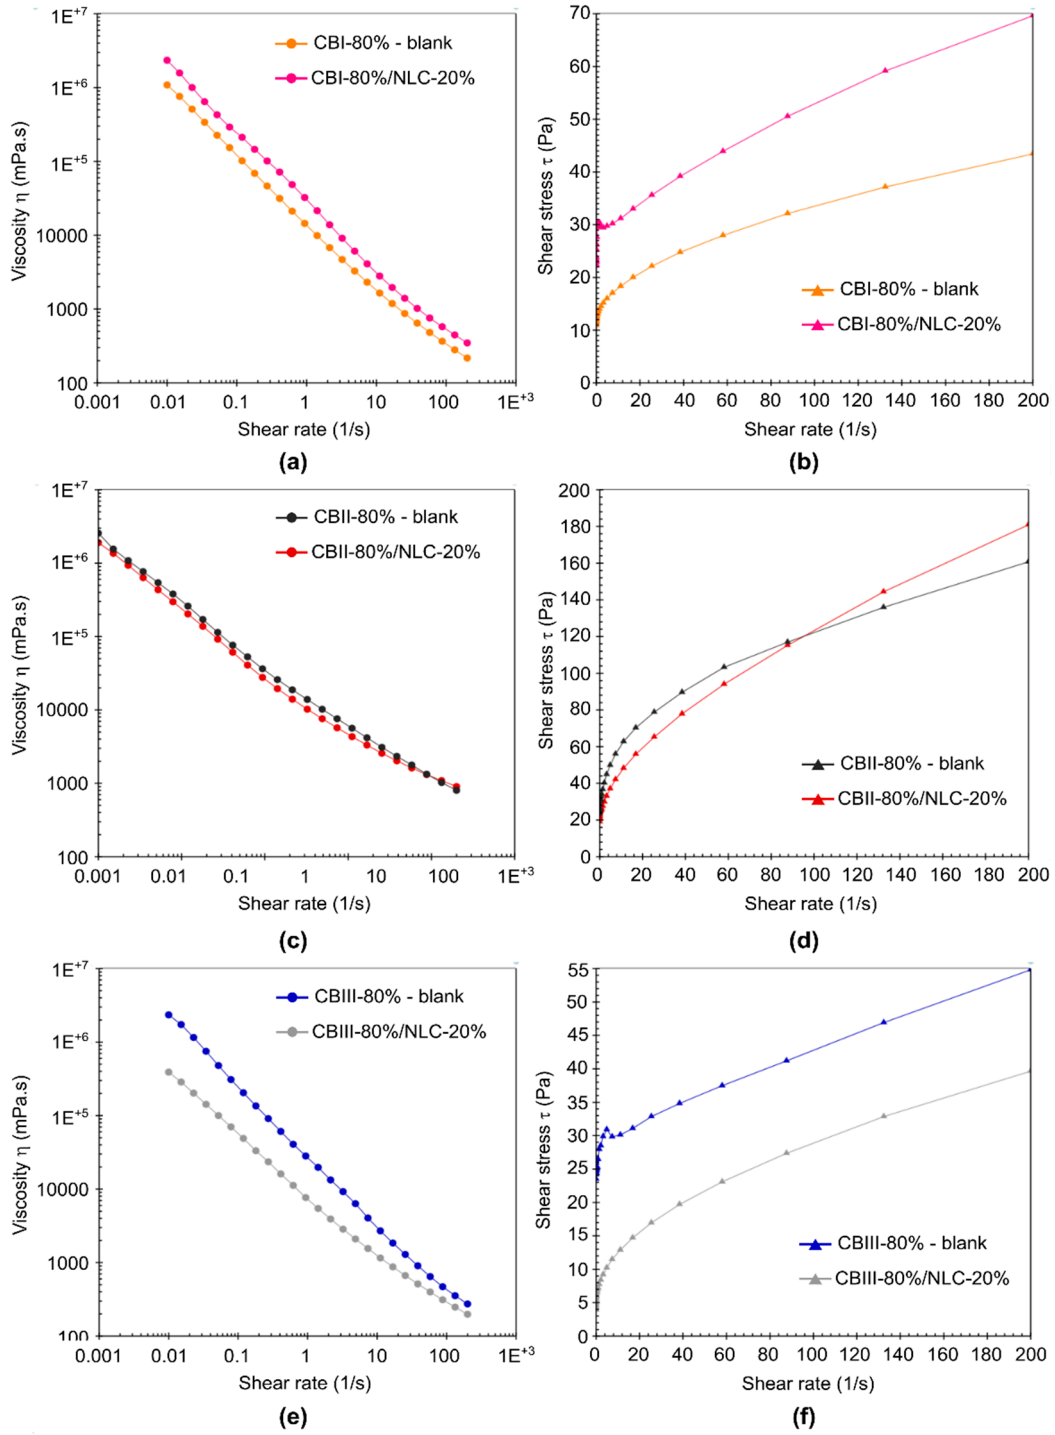

Figure S1. Viscosity (Viscosity vs Shear rate) and flow (Shear stress vs Shear rate) curves of (a - b) CBI-80% and 20% of water (blank) or 20 % of SC-NLC; (c - d) CBII-80% and 20% of water (blank) or 20 % of SC-NLC; (e - f) CBIII-80% and 20% of water (blank) or 20 % of SC-NLC.

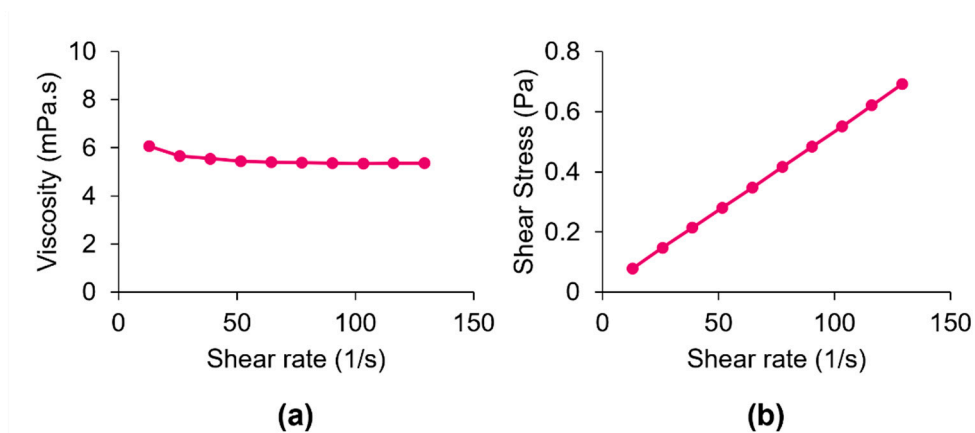

Figure S2. SC-NLC viscosity (a) and flow (b) curves, represented by viscosity vs shear rate and shear stress vs shear rate, respectively.

3. *In vivo* photoprotection

The FPS and UVA-PF data obtained for the three cream bases (I, II and III) containing 20% of SC-NLC or 20% of emulsion were evaluated based on the volunteers' skin phototype. This assay was performed aiming to better understand its impact on the products' photoprotection response. The results of this sub-analysis are shown in Figure S3.

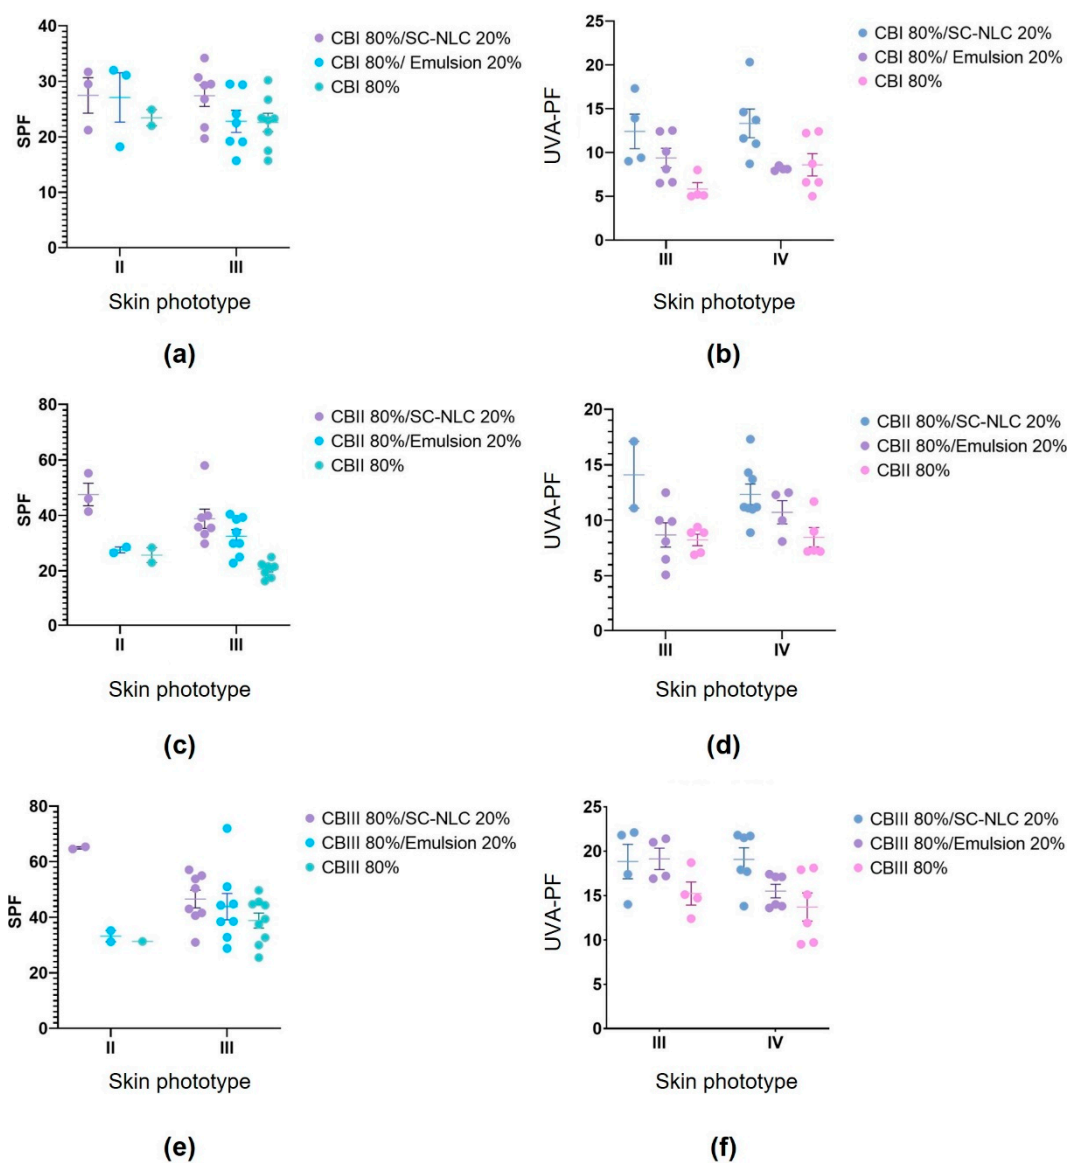

Figure S3. SPF and UVA-PF response, respectively, based on the volunteers phototype applying cream base (a-b) I; (c-d) II and (e-f) III, and their respective mixtures of 80% cream base + 20% of SC-NLC or 20% of emulsion.
