Supplementary Materials

Figure S1. Current and future distribution of *Anatolichthys anatoliae*, *Anatolichthys iconii*, *Capoeta pestai* and *Chondrostoma beysehirense* in the CAE. Colours show habitat suitability and the value of suitability increases in red areas.

Figure S2. Current and future distribution of *Oxynoemacheilus nasreddini*, *Pseudophoxinus anatolicus*, *Pseudophoxinus crassus*, and *Squalius recurvirostris* in the CAE. Colours show habitat suitability and the value of suitability increases in red areas.

Table S1. Endemic fish fauna of the Central Anatolian Ecoregion and their IUCN conservation status.

Table S2. The environmental predictors used in the SDM with their variance inflation factors (VIF) after the exclusion of collinear variables
