## Supplementary Figures

**Figure S1.** Number and area of plaques across subject groups. Comparison of number of the plaques (a) and total area of the plaque (b) between non-obese, subjects with general, central and mixed obesity. Error bars with 95% confidence interval for the mean are shown.

**Figure S2.** Subgroup analysis of number and area of plaques. Comparison of number of the plaques (a) and total area of the plaque (b) between subjects with normal and high serum uric acid (SUA) levels among non-obese, general, central and mixed obesity groups. Error bars with 95% confidence interval for the mean are shown.
