

BAL culture	BioFire Pneumonia Panel	RPIP
<i>Acinetobacter baumannii</i> (n =1)	<i>Acinetobacter baumannii</i> (n = 2)	<i>Acinetobacter baumannii</i> (n = 1)
<i>Acinetobacter radioresistens</i> (n =1)	<i>Escherichia coli</i> (n = 2)	<i>Achromobacter xylosoxidans</i> (n = 2)
Aspergillus species (n = 3)	<i>Haemophilus influenzae</i> (n = 2)	Adenovirus C (n = 1)
<i>Escherichia coli</i> (n = 1)	<i>Klebsiella oxytoca</i> (n =1 )	Coronavirus HUK1 (n = 1)
<i>Haemophilus influenzae</i> (n =1)	<i>Klebsiella pneumoniae</i> (n = 3)	<i>Escherichia coli</i> (n = 2)
<i>Klebsiella oxytoca</i> (n =1 )	<i>Moraxella catarrhalis</i> (n = 1)	<i>Haemophilus influenzae</i> (n = 1)
<i>Klebsiella pneumoniae</i> (n =2 )	Proteus species (n = 1)	<i>Klebsiella oxytoca</i> (n =1 )
<i>Legionella pneumophila</i> (n = 1)	<i>Pseudomonas aeruginosa</i> (n= 6)	<i>Klebsiella pneumoniae</i> (n = 3)
<i>Mycobacterium abscessus</i> (n = 1)	Respiratory syncytial virus (n = 1)	<i>Mycobacterium avium</i> complex (n = 1)
<i>Mycobacterium avium</i> complex (n = 5)	Rhinovirus (n = 1)	<i>Mycobacterium kansasii</i> (n = 1)
<i>Proteus mirabilis</i> (n = 1)	<i>Staphylococcus aureus</i> (5)	<i>Proteus mirabilis</i> (n = 1)
<i>Pseudomonas aeruginosa</i> (n= 4)		<i>Pneumocystis jirovecii</i> (n = 1)
<i>Rhizopus</i> species (n = 1)		<i>Pseudomonas aeruginosa</i> (n = 6)
<i>Staphylococcus aureus</i> (3)		SARS-CoV-2 (n = 7)
<i>Stenotrophomonas maltophilia</i> (n =1)		<i>Staphylococcus aureus</i> (n = 2)
		<i>Stenotrophomonas maltophilia</i> (n =3)
		Haemophilus parainfluenzae (n = 1)
		<i>Streptococcus anginosus group</i> (n = 4)
		Actinomyces species (n = 4)
		<i>Bacteroides fragilis</i> (n = 1)
		<i>Capnocytophaga</i> species (n = 7)
		<i>Corynebacterium</i> species (n = 5)
		Cytomegalovirus (n = 4)
		<i>Delftia</i> species (n = 1)
		Dialister species (n = 2)
		<i>Dulosigranulum</i> species (n = 1)
		Ebstein-Barr Virus (n = 5)
		<i>Eikenella</i> species (n = 1)

	Fusobacterium species (n = 2)
	Herpes-simplex virus-1 (n = 2)
	Human herpes-virus 6 (n = 2)
	Parvimonas species (n = 2)
	Prevotella species (n = 10)
	<i>Pseudomonas fluorescens</i> (n = 5)
	Rothia species (n = 8)
	Slackia species (n = 1)
	<i>Trophycerema whipplei</i> (n = 1)
	<i>Ureaplasma urealyticum</i> (n = 1)
	Veillonella species (n = 8)

**Supplement Table S1.** Organisms identified by each diagnostic method. Each is listed in alphabetical order and columns should not be compared. Organisms in blue text are those with unclear pathogenicity.

<b>Routine Diagnostics Result</b>	<b>RPIP Result</b>	<b>New/Additional Organisms Identified</b>	<b>Potential change in Antibiotic Management</b>
Culture and/or mPCR positive	No new Organisms (10)	--	No change
	Positive (24)	EBV	No change
		Eikenella corrodens, Pseudomonas fluorescens	No change (patient culture positive for Pseudomonas aeruginosa, antibiotics for this would cover additional RPIP organisms)
		Pseudomonas fluorescens	No change (patient culture positive for Pseudomonas aeruginosa, antibiotics for this would cover additional RPIP organism)
		Veillonella parvula, Ureaplasma urealyticum, Streptococcus constellatus	No change (patient culture positive for S. aureus and E. faecalis, antibiotics for these would cover additional RPIP organisms)
		Rothia mucilaginosa, Prevotella melaninogenica, Capnocytophaga sputigena	No change (patient culture positive for Acinetobacter baumannii, antibiotics for these would cover additional RPIP organisms)
		Prevotella melanin, Streptococcus mitis, Actinomyces graevenitzii,	Add anaerobic coverage or Beta-lactam (patient culture positive for MAC and Viridans streptococcus)

	<p><i>Veillonella parvula,</i> <i>Campylobacter coniscus</i></p>	
	<p><i>Mycobacterium avium complex,</i> <i>Rothia mucilaginosa,</i> <i>Actinomyces graevenitzii,</i> <i>Prevotella melanogogenica,</i> <i>Veillonella parvula,</i> <i>Streptococcus mitis,</i> <i>Campylobacter coniscus</i></p>	<p>Add treatment for MAC Add anaerobic coverage or Beta-lactam (patient only culture positive for Viridans streptococcus)</p>
	<p><i>Achromobacter xylosox,</i> <i>Bacteroides fragilis,</i> <i>Corynebacterium striatum,</i> <i>Parvimonas micra,</i> <i>Prevotella melani,</i> <i>Streptococcus constellatus,</i> <i>Fusobacterium nucleatum,</i> <i>Pseudomonas fluorescens</i></p>	<p>No change (Patient culture positive for <i>P. aeruginosa</i>, and anti-Pseudomonal therapy would cover the additional RPIP organisms</p>
	<i>Pseudomonas fluorescens</i>	No change (patient culture positive for <i>Pseudomonas aeruginosa</i> )
	<i>EBV, HHV6</i>	Add antiviral for HHV6
	<i>EBV, HHV6, CMV</i> <i>Corynebacterium striatum</i>	Add antiviral for CMV and HHV6
	<i>HSV-1, K. oxytoca, Veillonella parvula</i>	Add antiviral for HSV

	Rothia mucilaginosa, Streptococcus mitis, Veillonella parvula, Dialister pneumosintes, Prevotella melanina, Haemophilus parainfluenzae, Campylobacter coniscus	No change (patient was culture positive for K. pneumoniae and H. influenzae, antibiotics for these organisms would cover the additional ones identified by RPIP)
	Prevotella melaninogenica, Rothia mucilaginosa, Campylobacter coniscus	No change (patient culture positive for Staphylococcus aureus and Lactobacillus)
	Corynebacterium striatum, Stenotrophomonas spp., Pseudomonas fluorescens	Add antibiotic for Stenotrophomonas spp. (patient already culture positive for P. aeruginosa, no additional therapy for P. fluorescens).
	Stenotrophomonas spp., Achromobacter xylosoxidans, Klebsiella pneumoniae, Corynebacterium striatum, Delftia spp., Pseudomonas fluorescens	Add antibiotic for Stenotrophomonas spp. (patient culture positive for Acinetobacter baumannii, antibiotics for this organism would cover additional organisms identified by RPIP)
	EBV, CMV, Enterococcus faecium, Corynebacterium spp.	Add antiviral for CMV Add antibiotic for E. faecium
	EBV, CMV, Enterococcus faecium	Add antiviral for CMV
	HHV-6	Add antiviral

	Dolosigranulum pignum	Add Gram-positive coverage (patient only positive for Covid)	
	Human adenovirus	No change	
	Rothia mucilaginosa, Acinetobacter pitii, Stenotrophomonas maltophilia	Add antibiotic for Stenotrophomonas spp. (patient culture positive for Acinetobacter baumannii, antibiotics for this organism would cover additional organisms identified by RPIP)	
	Staphylococcus aureus, Prevotella melanina, Rothia mucilaginosa	No change (patient culture positive for methicillin resistant S. aureus)	
	Rothia mucilaginosa, Prevotella pleuritidis, Dialister pneumosintes, Parvimonas micra, Veillonella parvula, Actinomyces israelii, Slackia exigua, Campylobacter consicus, Fusobacterium nucleatum	Add high dose penicillin for A. israelii (patient culture positive for H. influenzae and Streptococcus spp., antibiotics for this would cover additional RPIP organisms)	
Culture and mPCR negative	Negative (0)	-- No change	
	Positive (4)	Pneumocystis jirovecii Rothia mucilaginosa Pseudomonas aeruginosa Escherichia coli	Add trimethoprim-sulfamethoxazole and possible prednisone Add B-lactam Add anti-Pseudomonal Add Gram-negative coverage

**Supplement Table S2.** The potential impact of RPIP results on antibiotic therapy for the 38 cases of suspected pneumonia.
