Table S1. PRISMA 2020 checklist.

Section and Topic	Item #	Checklist item	Location where item is reported
TITLE			
Title	1	Identify the report as a systematic review.	Lines 2–3
ABSTRACT			
Abstract	2	See the PRISMA 2020 for Abstracts checklist.	Lines 12–32 with MDPI word limit.
INTRODUCTION			
Rationale	3	Describe the rationale for the review in the context of existing knowledge.	1. Introduction
Objectives	4	Provide an explicit statement of the objective(s) or question(s) the review addresses.	1.2. Research Questions
METHODS			
Eligibility criteria	5	Specify the inclusion and exclusion criteria for the review and how studies were grouped for the syntheses.	2.1. Eligibility
Information sources	6	Specify all databases, registers, websites, organizations, reference lists and other sources searched or consulted to identify studies. Specify the date when each source was last searched or consulted.	2.2. Information Sources and Search Strategy
Search strategy	7	Present the full search strategies for all databases, registers, and websites, including any filters and limits used.	Presented an example, as our method is simple to follow.
Selection process	8	Specify the methods used to decide whether a study met the inclusion criteria of the review, including how many reviewers screened each record and each report retrieved, whether they worked independently, and if applicable, details of automation tools used in the process.	2.3. Article and Data Selection Process and Data Items
Data collection process	9	Specify the methods used to collect data from reports, including how many reviewers collected data from each report, whether they worked independently, any processes for obtaining or confirming data from study investigators, and if applicable, details of automation tools used in the process.	2.3.
Data items	10a	List and define all outcomes for which data were sought. Specify whether all results that were compatible with each outcome domain in each study were sought (e.g., for all measures, time points, and analyses), and if not, the methods used to decide which results to collect.	2.3.
	10b	List and define all other variables for which data were sought (e.g., participant and intervention characteristics and funding sources). Describe any assumptions made about any missing or unclear information.	2.3.
Study risk of bias assessment	11	Specify the methods used to assess the risk of bias in the included studies, including details of the tool(s) used, how many reviewers assessed each study and whether they worked independently, and if applicable, details of automation tools used in the process.	2.4. Risk of Bias Assessments
Effect measures	12	Specify for each outcome the effect measure(s) (e.g., risk ratio and mean difference) used in the synthesis or presentation of results.	2.5. Effect Size Measures, Synthesis Methods, and Certainty Assessment
Synthesis	13a	Describe the processes used to decide which studies were eligible for each synthesis (e.g., tabulating the study intervention	2.5.

Supplement Files

Section and Topic	Item #	Checklist item	Location where item is reported
methods		characteristics and comparing against the planned groups for each synthesis (item #5).	
	13b	Describe any methods required to prepare the data for presentation or synthesis, such as the handling of missing summary statistics or data conversions.	2.5.
	13c	Describe any methods used to tabulate or visually display the results of individual studies and syntheses.	2.5.
	13d	Describe any methods used to synthesize results and provide a rationale for the choice(s). If a meta-analysis was performed, describe the model(s), method(s) to identify the presence and extent of statistical heterogeneity, and software package(s) used.	2.5.
	13e	Describe any methods used to explore possible causes of heterogeneity among study results (e.g., subgroup analysis and meta-regression).	2.5.
	13f	Describe any sensitivity analyses conducted to assess the robustness of the synthesized results.	Orwin's N somewhat addresses this.
Reporting bias assessment	14	Describe any methods used to assess the risk of bias due to missing results in a synthesis (arising from reporting biases).	2.4.
Certainty assessment	15	Describe any methods used to assess certainty (or confidence) in the body of evidence for an outcome.	2.5.
RESULTS			
Study selection	16a	Describe the results of the search and selection process, from the number of records identified in the search to the number of studies included in the review, ideally using a flow diagram.	3.1. Study Selection and Characteristics
	16b	Cite studies that might appear to meet the inclusion criteria but were excluded, and explain why they were excluded.	Available from ML
Study characteristics	17	Cite each included study and present its characteristics.	Table 2
Risk of bias in studies	18	Present assessments of risk of bias for each included study.	Table 3, 3.2. Risk of Bias within Studies
Results of individual studies	19	For all outcomes, present, for each study: (a) summary statistics for each group (where appropriate) and (b) an effect estimate and its precision (e.g., confidence/credible interval), ideally using structured tables or plots.	See results for mean level and correlations
Results of syntheses	20a	For each synthesis, briefly summarize the characteristics and the risk of bias among the contributing studies.	See result tables for mean level and correlates.
	20b	Present the results of all statistical syntheses conducted. If a meta-analysis was performed, present for each the summary estimate and its precision (e.g., confidence/credible interval) and measures of statistical heterogeneity. If comparing groups, describe the direction of the effect.	See results for mean level and correlations
	20c	Present the results of all investigations of possible causes of heterogeneity among the study results.	The mixed-effect analyses somewhat address the possible causes—groups of athletes within the larger total sample and subgroups

Supplement Files

Section and Topic	Item #	Checklist item	Location where item is reported
			of positive and negative factors.
	20d	Present the results of all sensitivity analyses conducted to assess the robustness of the synthesized results.	Orwin's N somewhat addresses this.
Reporting biases	21	Present the assessments of the risk of bias due to missing results (arising from reporting biases) for each synthesis assessed.	See all funnel plot figures
Certainty of evidence	22	Present the assessments of certainty (or confidence) in the body of evidence for each outcome assessed.	Moved to discussion section based on reviewer comment.
DISCUSSION			
Discussion	23a	Provide a general interpretation of the results in the context of other evidence.	4. Discussion
	23b	Discuss any limitations of the evidence included in the review.	4.1. AIMS Literature and Study Limitations
	23c	Discuss any limitations of the review processes used.	4.1.
	23d	Discuss the implications of the results for practice, policy, and future research.	Presented across discussion
OTHER INFORMATION			
Registration and protocol	24a	Provide registration information for the review, including the register name and registration number, or state that the review was not registered.	None
	24b	Indicate where the review protocol can be accessed, or state that a protocol was not prepared.	See end materials
	24c	Describe and explain any amendments to information provided at registration or in the protocol.	None
Support	25	Describe sources of financial or non-financial support for the review and the role of the funders or sponsors in the review.	See end materials
Competing interests	26	Declare any competing interests of review authors.	None, see end materials
Availability of data, code, and other materials	27	Report which of the following are publicly available and where they can be found: template data collection forms; data extracted from included studies; data used for all analyses; analytic code; any other materials used in the review.	Reported ML has the documents.
