Message from the Guest Editor

Over the past three years, COVID-19, the disease caused by SARS-CoV-2, has resulted an estimated 5 million deaths and 257 million cases worldwide. COVID-19 has significantly affected people lives, directly and/or indirectly, due to a virulent pathogen that continues to evolve while we are still learning how to prevent and control the disease.

The aim of this Special Issue will be focused on the latest approaches to the diagnostics and therapy of COVID-19 by summarizing the recent clinical and experimental advances on conventional therapies, such as antiviral drugs, vaccines, anti-SARS-CoV-2 antibody treatments, and on the diagnostics of laboratory using new biomarkers useful for both the diagnosis and prognosis of COVID-19. All of these different approaches are currently the subject of extensive research and clinical trials.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
