30 November 2024

Message from the Guest Editors

Dear Colleagues,

AI has attracted the attention of diverse medical disciplines. It has exhibited promise in enhancing the efficiency of healthcare. Moreover, it has the potential to decrease the reliance on expensive diagnostic tools and personnel, facilitating improved healthcare delivery.

Within the realm of ophthalmology, AI has proven to possess diagnostic precision akin to that of medical professionals in identifying conditions such as macular degeneration, glaucoma, and diabetic retinopathy. However, there is still a need for expanded research and development in the areas of the cornea and anterior segment. Scientific teams worldwide have evaluated the effectiveness of AI algorithms in diagnosing various diseases of the anterior segment of the eye. In this Special Issue, we aim to cover the latest innovations and advancements in the application of AI in the diagnosis, monitoring, and management of cornea and ocular surface conditions.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
