Message from the Guest Editor

We have the pleasure to invite you to submit your work to this Special Issue on “Advances in Dental Imaging”. A variety of imaging methods plays a key important role in the diagnosis and assessment of dental diseases, such as optical coherence tomography, ultrasound, dental MRI, dental CT, cone-beam computed tomography, optical imaging, acoustic imaging, dental radiography, panoramic radiography, artificial intelligence and so on. We intend to establish a collection of excellent publications around this theme and provide a venue for networking and communication between scholars in the field of dental imaging. Original research articles, reviews, short communications and interesting images are welcome, as well as either clinical or basic research. All papers will be fully open access upon publication after peer review.
