Deadline for manuscript
submissions:

31 December 2024

Message from the Guest Editor

Angiography is a medical imaging technique used to visualize the lumen of blood vessels and organs of the body, specifically in the arteries, veins, and heart chambers. Currently, various types of angiography are available that can be harnessed to diagnose different medical conditions including invasive angiography, computed tomography angiography (CTA) and magnetic resonance angiography (MRA). The importance of such examinations for clinical routine has dramatically increased due to technical developments.

This Special Issue aims to provide an overview of recent studies in angiography, CTA and MRA, and its application in clinical diseases. In this context, original articles and review articles based on angiography-related diagnostic imaging will be included. Technologies such as spectral CT imaging, including dual-energy CT and photon-counting CT, radiation dose reduction algorithms, and possibilities for contrast media or artifact reduction will be covered in this Special Issue.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q2 (Internal Medicine)
