Message from the Guest Editor

Critical limb-threatening ischemia (CLTI) is a fascinating field of research; in fact, this disease is associated with mortality, amputation, and impaired quality of life. The evaluation and management of CLTI represent our goals to improve pivotal research. Haemodynamic testing, imaging patterns, and inflammatory molecules are all potential biomarkers that can be considered to update our understanding and treatment of limb ischemia. We aim to promote a proper diagnostic flow-chart and follow-up after treatment by focusing on all of these aspects.
