Message from the Guest Editors

Today, we can find a myriad of devices, from the smallest to the biggest, from tiny sensors to large cloud data-centers, and examples such as smartwatches, smartphones, tablets, laptops, desktops, etc., all connected, continuously or intermittently, making a truly ubiquitous system. A ubiquitous system means that we have a very large number and different types of devices, all connected, thus providing an infrastructure for applications to run.

This Special Issue focuses on distributed systems as the core technology to support ubiquity, as well as the corresponding applications running on top. We are interested in contributions regarding the design, architecture, implementation and evaluation of both ubiquitous systems and ubiquitous applications.

Message from the Editor-in-Chief

I encourage you to contribute research and comprehensive review articles for publication in Journal of Sensors and Actuator Networks (JSAN), an international, open access journal which provides an advanced forum for research findings in areas of sensors and actuators. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sensors and actuators and fostering applications of sensor-based measurements and effective actuator incorporation.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), dblp, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Computer Science, Information Systems*) / CiteScore - Q1 (Control and Optimization)
