# Human-Environmental Interactions: Everyday Stories in the Anthropocene

Guest Editors:

**Dr. Sebastiano Ettore Spoto** 

Dr. Sabatino Ciarcia

Dr. Francesco Crea

Dr. Sebastiano D'Amico Dr. Rosanna Maniscalco

or. Rosanna Maniscalco

Dr. Ádám Nádudvari Dr. Roberta Somma

Prof. Dr. Udo Zimmermann

Deadline for manuscript submissions:

closed (31 December 2023)

# Message from the Guest Editors

Although the term "Anthropocene" has still not been formalized as a new geologic epoch, scholars informally refer to this term to indicate a new geological system in which the intensity of human activity strongly impacted the balances of Earth Systems. Throughout human civilization, people have established and developed communities and societies in locations that allowed them to take advantage of the resources and strategic locations afforded by the action of natural and geological processes. Global climate changes, intensified natural hazards, and extreme events drive new challenges globally for many countries and regions by affecting millions of people annually.

Accordingly, this Special Issue welcomes research and review papers on environmental sciences, physics, geophysics, biology, chemistry, and earth science applied to the Anthropocene epoch.

## **Message from the Editor-in-Chief**

We live in a Quaternary world, that is, a world shaped by the interplay of the different compartments of the earth system—lithosphere, hydrosphere, atmosphere, biosphere, cryosphere—during the last ~2.6 million years. It is not possible to understand the current world—and, hence, to anticipate its possible future developments—without knowing the Quaternary history of drivers, processes, and mechanisms that have generated it. Our own species is an evolutionary outcome of the Quaternary performance. Therefore, the journal *Quaternary* is born with the aim of being an integrative journal to encompass all aspects of Quaternary science focused on understanding the complex world in which we live and to provide a sound scientific basis to anticipate possible future trends and inform environmental policies.

#### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, ESCI (Web of Science), GeoRef, and other databases.

**Journal Rank:** JCR - Q2 (*Geosciences, Multidisciplinary*) / CiteScore - Q2 (*Earth-Surface Processes*)
